REFERENCE

ROLE

Back-end/ Full stack software engineer.

EXPERIENCE

25/09/22 - Present   **launchWith**
Software engineer intern: I'm currently working as a software engineer intern (Remote) at launchWith, a startup company based in Utah USA. My duties mainly are to develop APIs and web server (backend) logic using node.js(nest). However, I'm am more of a full stack engineer as I can switch between frontend and backend.

2018 - Present   **Upwork**
Freelance software developer Building client's projects both backend and frontend as a part part time freelancer.

EDUCATION

2024   **Zimbabwe Open University.**
Bsc Honors In Information Technology. (Computer software engineering) Pending

2022   CCNA

PROJECTS

E-commerce web application
A complete dynamic MERN stack web application with NoSql database as storage, admin panel and paypay payment gateway. I built the API and web server using node.js(express) and the UI using react.js.

launchWith

Currently building this product as a remote software engineer intern. We are using nest.js (a node.js based framework) to build the rest API and web server. In the frontend, we are using React.js library for UI pages.

Tinder clone dating app

I built a tinder clone web application using the MERN stack technology. For the RESTapi I used node.js (express) and react.js for the UI.

Travel weather application

I built a weather forecast application to help travellers and tourists to be aware of the weather conditions of their destinations before travelling.
